W3 Python Basics

Friday, September 19, 2025   5:57 PM

Topics

1. How to make a fried rice, variable, two Check-ins per day, missing check in more than 6 times or 3 assignment disqualify
2. Open folder using open with, close folder from VSC
3. Search in VSC ">snippet", choose the "configure snippets" and click on python
   Change the code from the snippet in Github/gmba/baai to the file in the VSC
4. print(f'Result {Sum}')

1. print()

- This is a built-in Python function.
- It outputs text or values to the console.

2. f'...'

- The leading f before the quotes makes this an **f-string** (introduced in Python 3.6).
- F-strings let you **embed variables or expressions directly** inside {}.

3. 'Result {Sum}'

- "Result " is plain text.
- {Sum} means *insert the value of the variable Sum here*.
- Python will evaluate what's inside {} and substitute it into the string.

Summary

Variable
Sum, Minus

Action Items

☐ Practice creating file and applying snippets
☐ Practice how to modify code, commit, sync to GitHub
